

Lactate-route transcripts and ordinary proteins

Fixed 21-gene panel | external RNA cohorts; prostate proteins: PXD066054, 5 BPH + 5 cancer samples

RNA: difference on $\log_2(\text{TPM} + 0.5)$ scale. Protein: $\log_2$ ratio of group medians of exported quantities.
Blank protein rows lack an unambiguous exact UniProt group. No matched RNA, K1a occupancy or flux is inferred.
