

Nonlinear Sample-Level Prediction Across Evaluations (RF_mtry135)

18,332 common RNA genes | Random Forest (500 trees, mtry=135) | Material-balanced weights

Each dot represents an individual RNA sample. Labels are shared material-level measurements.
Panel 1: Model trained & tested on training split; Panel 2: Model trained on split and blind-tested on held-out samples;
Panel 3: Model fit on all 1,898 samples; Panel 4: 14-fold leave-one-source-out cross-validation.
